

## On some Robin problems driven by $p$ -Laplacian as $p$ tends to $1^+$

**Francescantonio OLIVA**, Università degli studi di Napoli Federico II - Napoli

We deal with the asymptotic behaviour of solutions for some classes of Robin problems driven by the  $p$ -Laplacian for equations as

$$-\Delta_p u = F(x, u) \text{ in } \Omega,$$

for suitable  $F$ 's where  $\Omega$  is an open, bounded subset of  $\mathbb{R}^n$  with regular boundary. Examples and consequences will be discussed as well as the optimality of the results.
